

MycorDip Universal Transplanting Aid

Mycorrhizal root dip inoculant with hydrogel and biostimulants; suitable for most trees and shrubs.

Highlights

- ❖ Reduced 'transplant shock'.
- ❖ Quicker re-establishment.
- ❖ Increased survival rates.
- ❖ Less wasteful re-planting
- ❖ Positive feed-back from users and trials.
- ❖ Saves money.
- ❖ Easy to use.
- ❖ Satisfied customers.

Introduction

"Biostimulants" and almost anything prefixed with "Bio" are all the rage just now and we are presented with an astonishing and bewildering array of products to choose from. Often accompanied by outlandish claims.

But did you know that over 20 years ago and before all the furore Plant Health Cure (PHC) were quietly and confidently working on their own biotechnology, developing precisely defined and scientifically proven products, many of which are now market leaders and industry benchmarks.

Products like **Biovin™**, **Compete™ Plus** and of course **MycorDip™**, are now well established, helping modern professional growers maximise yields, quality and crucial returns on investment.

MycorDip™ Universal – What is it?

MycorDip™ Universal is a carefully formulated combination of naturally occurring beneficial mycorrhizal fungi and bacteria together with water retaining polymeric hydrogel and biostimulants. Unlike some competitor products the full composition details are published.

MycorDip™ Universal is supplied in convenient cartons of 5 x 425 g bags, each bag sufficient to make around 20 litres of root dip.

MycorDip™ Universal – What does it do?

MycorDip™ Universal is used as a pre-plant root dip to inoculate bare root and containerised tree seedlings with beneficial mycorrhizal fungi and rhizosphere bacteria prior to field planting or potting. It contains six superior species of endo and ectomycorrhizal fungi that will colonize the roots of most tree and shrub species under a broad range of growing conditions.

MycorDip™ Universal contains water retaining polymer, seaweed meal and humic acids to enhance drought tolerance and root growth. It also contains six species of free-living rhizosphere bacteria that together fix nitrogen and solubilise phosphorus.

Species: MycorDip™ Universal is suitable for all tree and shrub species except rhododendrons, azaleas, and mountain laurel which associate with ericoid mycorrhizal fungi.

MycorDip™ Universal – What are the benefits?

The key benefit of Compete™ Plus is to maximise operating margin and contribution by simply improving the performance of transplants. It does this by:

- ❖ Reducing ‘transplant shock’.
- ❖ Enabling quicker re-establishment.
- ❖ Increasing rates of survival with reduced need for costly replanting.

MycorDip™ Universal – How is it used?

Simple, mix MycorDip™ Universal with water in a bucket and stir for 3 - 5 minutes into a slurry with an adhesive consistency similar to “thick gravy”. Normally this can be achieved by mixing one 425 gram pack in 20 litres of water.

Before planting, dip the seedlings into the mixture so that the roots are coated evenly. Only dip 3/4 of the lower root system. No need to dip the root/stem area. For container seedlings, gently shake the loose rooting medium from the roots and dip roots in the mixture.

Transplant as soon as possible after dipping.

NB always carefully read label before using any product.

MycorDip™ Universal – Where can I buy it?

MycorDip™ Universal is available direct from Solufeed Ltd at the address below, through carefully selected distributors and can be purchased securely on line at shop.solufeed.co.uk.
